

EXPERIENCE

Senior Software Engineer

Prominent Edge

- 📅 09/2024 - Present

📍 Centreville, VA
- Developed scalable React and Next.js applications for SaaS platforms, social networking products, and AI-driven web applications with focus on performance, UX, and accessibility.
 - Built reusable frontend systems for social engagement platforms including activity feeds, real-time messaging, notifications, user profiles, and community interactions.
 - Designed backend APIs using Node.js, NestJS, Django REST Framework, and PostgreSQL supporting multi-tenant SaaS business logic and subscription-based workflows.
 - Implemented real-time communication features such as live chat, notifications, and collaborative updates using WebSockets and Django Channels.
 - Integrated OpenAI GPT APIs for AI-powered content generation, customer support automation, smart replies, semantic search, and recommendation systems.
 - Built vector search pipelines using embeddings and Pinecone to enhance content discovery, personalized recommendations, and intelligent document retrieval.
 - Built headless e-commerce architectures supporting dynamic product catalogs, inventory synchronization, secure checkout flows, and order management systems.
 - Implemented frontend optimization strategies including SSR, lazy loading, caching, and code splitting to improve engagement and SEO performance.
 - Managed AWS cloud infrastructure using ECS, Lambda, S3, Docker, and GitHub Actions CI/CD for scalable production deployments.
 - Collaborated with product and UX teams to deliver responsive, mobile-first, and accessible user experiences across customer-facing platforms.

Software Engineer

DockYard

- 📅 07/2020 - 08/2024

📍 Boston, MA
- Developed enterprise React + TypeScript applications for CRM, ERP, and operational management platforms used for workflow automation and business analytics.
 - Built scalable API-driven backend services using Node.js, NestJS, Django, and PostgreSQL for customer management, reporting, and operational workflows.
 - Created real-time analytics dashboards for monitoring KPIs, operational metrics, financial reporting, and user activity tracking.
 - Integrated OpenAI APIs to build AI-powered workflows for automated content generation, intelligent search, personalized recommendations, and business process automation.
 - Designed reusable frontend architecture patterns, shared component libraries, hooks, and scalable state management systems.
 - Implemented secure authentication and authorization systems using OAuth2, JWT, SSO integrations, and role-based access control for enterprise applications.
 - Integrated Elasticsearch and Kibana to support operational analytics, log aggregation, audit trails, and advanced search capabilities.
 - Migrated legacy Flask-based services into centralized API-driven architectures improving scalability and maintainability.
 - Automated CI/CD pipelines using Docker and GitLab CI for cloud-native deployment workflows and release automation.
 - Collaborated in Agile teams with product owners and stakeholders to modernize enterprise business operations and reporting systems.

SUMMARY

Senior Full-Stack Engineer with 10+ years of experience delivering web and mobile platforms across Real Estate, E-commerce, Fintech, Healthcare, IoT, and Social industries. Expert in React/Next.js, Node.js/Express, MongoDB, React Native, AWS, and AI/LLM integrations (GenAI features, embeddings, and vector search). Skilled in improving performance, accessibility, and reliability while mentoring teams and delivering scalable, testable architectures.

SKILLS

Core Frontend & Styling

React	Next.js	TypeScript
JavaScript (ES6+)		Redux Toolkit
React Query	Tailwind CSS	
Material UI	Vue.js	HTML5
CSS3	Responsive Design	
WebSockets		

Core Backend & Databases

Node.js	NestJS	Express.js
Python	Django	
Django REST Framework		FastAPI
REST APIs	GraphQL	PostgreSQL
Redis	Elasticsearch	MySQL
MongoDB		

APIs & Integrations

OpenAPI	Stripe API	SendGrid API
OAuth2	WebDAV	WebSockets

EXPERIENCE

Full Stack Engineer

Bacancy Technology

📅 02/2018 - 07/2020 📍 Miami, FL

- Developed cloud-based file management and collaboration platforms using React, JavaScript, and REST APIs for enterprise document workflows.
- Built drag-and-drop upload systems with real-time collaboration, file sharing, permission management, and workspace organization features.
- Implemented chunked uploads, resumable downloads, and large-file processing pipelines for scalable document handling systems.
- Designed backend services using Node.js, NestJS, Django, Celery, Redis, and PostgreSQL supporting asynchronous processing and distributed workloads.
- Integrated AWS S3 storage solutions for secure file storage, version control, backup management, and document lifecycle workflows.
- Developed role-based access control, token-based authentication, and secure sharing permissions for enterprise collaboration systems.
- Implemented WebDAV integrations enabling cross-platform synchronization and remote file access functionality.
- Improved frontend performance and usability for large hierarchical file structures and enterprise-scale datasets.
- Worked closely with product and UX teams to modernize document management workflows and improve customer productivity.

Full Stack Developer

Grid Dynamics

📅 11/2015 - 01/2018 📍 San Ramon, CA

- Developed and maintained scalable e-commerce applications supporting product catalogs, shopping carts, customer reviews, and checkout systems.
- Built subscription billing and recurring payment workflows using Stripe, including invoicing, payment retries, and customer billing portals.
- Implemented inventory management, pricing synchronization, order processing, and customer account management systems.
- Developed educational platforms with student dashboards, course management, progress tracking, assessments, and content delivery systems.
- Built backend APIs using Django and Node.js supporting transactional workflows, user management, and reporting features.
- Created reusable frontend components using JavaScript and early React architecture patterns for customer-facing applications.
- Optimized database performance through indexing, query optimization, Redis caching, and asynchronous background processing.
- Automated email workflows using Celery and SendGrid for onboarding, transactional notifications, and marketing communications.
- Supported Linux-based production environments with deployment automation, logging, monitoring, and troubleshooting tools.

SKILLS

Cloud & DevOps

AWS (S3, RDS, Lambda, EC2, ECS)

Docker CI/CD Tools Nginx

Apache Ubuntu Linux

GitHub Actions

Testing & Task Queues

Celery Redis RabbitMQ Pytest

Kafka

PROJECTS

Freelance Senior Full Stack Engineer (Real Estate Platform)

📅 03/2024 - 09/2024 📍 Remote

Developed an AI-powered real estate marketplace platform for a U.S.-based property technology client, delivering an end-to-end homebuying experience that streamlined property discovery, buyer engagement, and transaction workflows.

- Built scalable property search and listing experiences using React, Next.js, TypeScript, and Tailwind CSS with server-side rendering and SEO optimization.
- Developed AI-powered property recommendation and natural-language search features using OpenAI APIs, enabling users to discover homes through conversational search experiences.
- Implemented intelligent property matching systems based on user preferences, search behavior, budget, location, and engagement analytics.
- Created buyer and agent dashboards supporting saved properties, property comparisons, inquiry management, appointment scheduling, and transaction tracking.
- Built secure backend services using Node.js, NestJS, PostgreSQL, and Redis to manage listings, offers, user accounts, workflows, and document processing.
- Integrated AI-assisted document analysis features that generated concise summaries of inspection reports, disclosures, contracts, and settlement documents.
- Developed real-time communication systems using WebSockets for buyer-agent messaging, notifications, and property status updates.
- Implemented mortgage pre-qualification workflows, financing calculators, and lender integration processes to improve buyer conversion rates.
- Built end-to-end transaction management features supporting property offers, negotiations, document approvals, escrow workflows, and closing milestones.
- Integrated role-based access control, OAuth2 authentication, and secure document management for buyers, agents, brokers, and administrators.
- Deployed cloud infrastructure using AWS ECS, Lambda, S3, CloudFront, RDS, Docker, and GitHub Actions CI/CD pipelines.
- Collaborated directly with stakeholders to define product requirements, user journeys, and AI-driven automation strategies for modern real estate operations.

EDUCATION

Bachelor of Science in Computer Science

[Texas A&M University](#)

📅 05/2011 - 10/2015 📍 College Station, TX, USA
